

SANAY GODHANI

sanaygodhani@cmail.carleton.ca | 343-558-0186 | [LinkedIn](#) | Toronto, ON

TECHNICAL SKILLS

Languages & Frameworks: Python, FastAPI, Java, Node.js, C++, Flask, Django, Spring Boot, ReactJS, JavaScript, TypeScript

Data & ML: TensorFlow, Pandas, NumPy, Scikit-Learn, Reinforcement Learning (PPO, Actor-Critic, Q-Learning)

Infrastructure & Tools: Redis, BullMQ, Git, GitHub, REST API Design, Docker (Fundamentals), Bash, VS Code, Postman

Databases: SQL, PostgreSQL – schema design, query optimization, ORM integration, Drizzle-ORM

Ventures & Interests Founder of [Indrith Studio](#), Deep Learning, Automation, RAG Architectures, LLM Fine-Tuning

WORK EXPERIENCE

Mishal Reborn Metals

Mumbai, Maharashtra

Trade Strategy & Sales Analyst

Feb 2026- Present

- Engineered an immutable, audit-ready inventory ledger system (PostgreSQL, Zod, advisory locks) handling **5–15 transactions/week** for a **5–6-person team**, replacing **manual** paper-based **reconciliation** with automated, real-time calculations.
- Built a real-time P&L engine aggregating revenue, container costs, labor, and disposal fees, giving the team **instant profitability visibility per transaction** instead of end-of-day/manual tallying.
- Supported sourcing and pricing decisions for **~100 tons/month** in metal volume (**~\$95K–\$115K in monthly revenue**) through continuous market monitoring (LME trends, supply/demand shifts), contributing to a team-wide effort to optimize purchasing timing and margins.
- Collaborated cross-functionally between trading and sales, supporting alignment between procurement and market demand as part of a small team driving consistent operational execution over a **6-month build-and-deploy period**

Nirmal Bang

Mumbai, Maharashtra

Software Engineer

Dec 2025- Feb 2026

- Architected and deployed a **full-stack internal communication platform** using **Flask** and **SQL**, featuring a dynamic template engine, role-based recipient selection, and real-time data hydration from the firm's production database.
- Engineered a robust backend API layer for template rendering and transactional email dispatch via **smtplib** and **Flask-Mail**, integrating directly with existing SQL infrastructure to manage contact lists, user data, and communication templates.
- Researched and prototyped a **deep learning model in Python** for automated extraction of structured financial data from unstructured sources such as scanned images and PDFs, exploring **TableNet**, **tesseract OCR** and document parsing techniques for potential use in financial data pipelines.
- Gained hands-on experience working within a production financial services environment, collaborating with the technology team at one of India's leading broking firms.

Barkat Landscaping

Ottawa, ON

Jr. Project Manager

May 2025- Dec 2025

- Managed several residential construction projects from start to completion, ensuring plans and scope matched client needs.
- Reviewed drawings and specifications and guided field teams and subcontractors with clear instructions.
- Found and addressed drawing conflicts early and raised clarification requests when needed. Maintained project records, including schedules, progress logs, purchase tracking, and cost reports, to support accurate forecasting.
- Supported RFIs, vendor coordination, and procurement to keep projects on schedule and avoid scope gaps.

PERSONAL & FREELANCE PROJECTS

Parlant: Intelligent French Learning Platform

- Designed and implemented a FastAPI backend with GZip compression and custom sliding-window rate limiting**, which prevented brute-force authentication abuse and reduced payload sizes, **resulting in a 35% reduction in API response latency**.
- Optimized database connection management** by engineering an **asynchronous** connection pool with `psycopg_pool`, which eliminated prepared statement errors in Supabase transaction mode, maintaining 99.9% database **query uptime during concurrent traffic spikes**.
- Built a **custom authentication bridge** and username-to-email resolution API to map local user data with Supabase JWT credentials, which resolved cross-credential login issues and reduced login-related **user failures** and **support issues** by **80%**.
- Integrated the **SM-2 spaced repetition algorithm** to **dynamically calculate vocabulary review** schedules, which automated review intervals based on individual recall quality, **increasing daily user session engagement by 25%**

EDUCATION

Carleton University

Ottawa, ON

Bachelor of Computer Science Major; minor in Statistics
